CAFFEINE AND SLEEP

Research Question:
Do I sleep fewer hours on caffeine days?

Data Collection:
21 consecutive days
October 19 − November 8, 2026

Variables:
Caffeine (Yes/No)
Caffeine amount (mg)
Sleep duration (hours)

KEY FINDINGS

Caffeine days: 11
Non−caffeine days: 10

Average sleep (caffeine): 6.91 hours

Average sleep (no caffeine): 8.95 hours

Difference: 2.04 fewer hours

Welch t−test:
t = 4.35
p = 0.000343

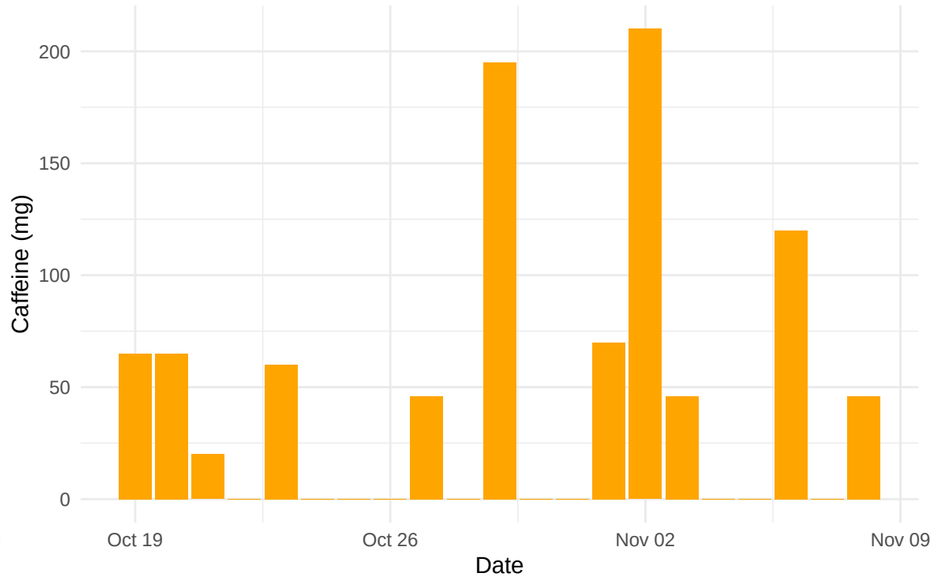
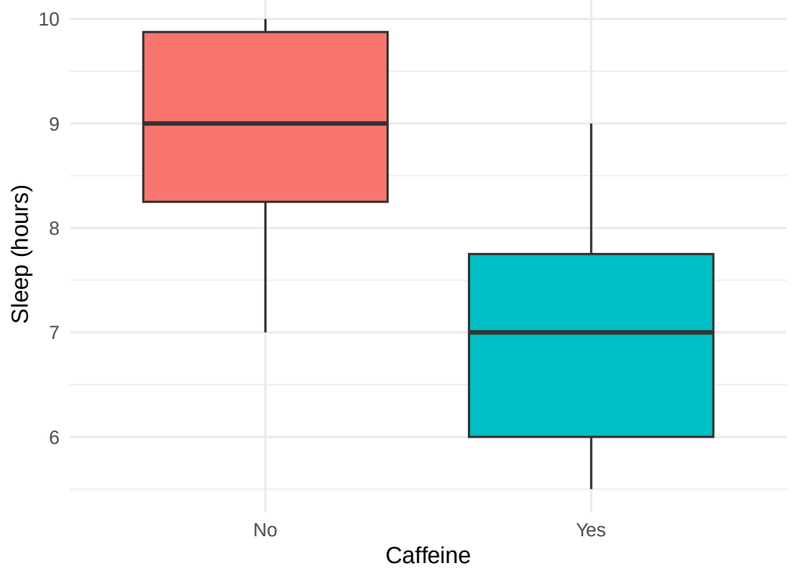
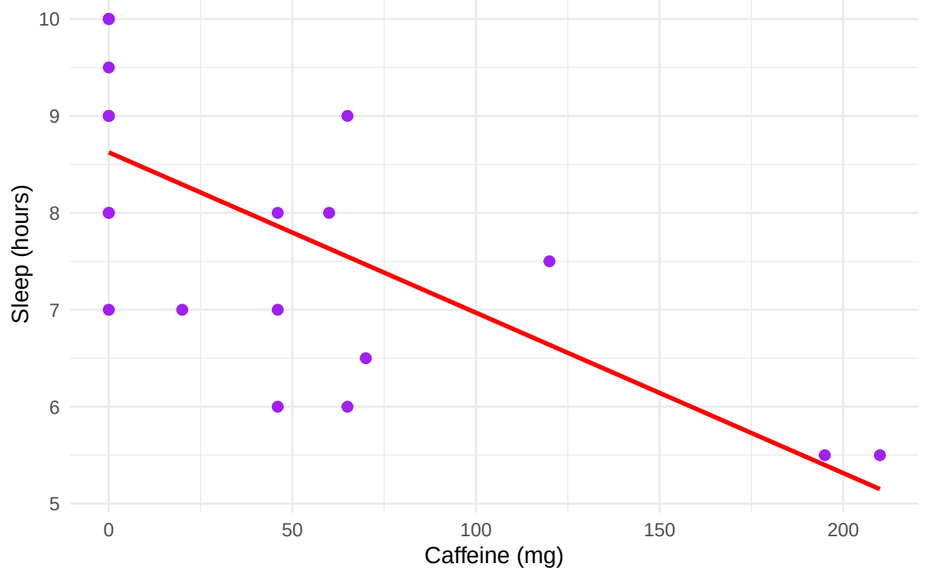
Daily Caffeine Consumption



Sleep by Caffeine Consumption



Caffeine Amount vs Sleep



CONCLUSION

My data suggest that I slept fewer hours
on caffeine days than on non−caffeine days.
This is an association, not proof of causation.
Other factors may influence sleep.
